

I have heard that there are NAB lobbyists trying to restrict what satellite radio broadcasters can transmit. I think the cable companies were trying to do this as well with satellite TV broadcasters in the past and it was voted down. How can it be possible that in American society, and the free enterprise system, that I as a citizen, consumer and paying subscriber to a service may have my rights violated in order to provide a preference to another industry. This is not how a free enterprise economy works.

I respectfully urge the FCC to reject the NAB petition 04-160 and support satellite broadcastings freedom to transmit services to the American public.
thank you....
